The Power of Lesson Study

Expanding Student Ownership in Mathematics

Carol Cronk

How do teacher teams solve a problem of practice?

Lesson study affords teams the opportunity to focus on student learning and try out new strategies without pressure. Working together, teams will utilize their own expertise and knowledge to study content, plan instruction, teach, and reflect on student learning at their own pace while being supported by a peer facilitator.

In this one day professional learning, participants will learn to:

- Foster a collegial learning environment through norms
- Use data to set goals and determine learning intentions
- Guide and support teachers through the lesson study cycle
- Increase student thinking and participation through lesson design
